

# MX Routing + Security = Powerful Together

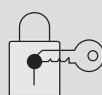

Is your network infrastructure well equipped to defend against new threats?

As cyber attacks increase in volume, frequency, and sophistication, security can no longer be an afterthought. Your network needs to be threat-aware, and that comes from extending security to every point of connection across the network. This is what Juniper Connected Security is all about.

## Add-on Security for your MX series platform

We want you to be able to get more from your current MX series platform investment. So, we have evolved it to be an integrated platform with routing and security services.

**MX-SPC3**  
Security Services Card

**Juniper-Corero**  
Joint DDoS Protection Solution

**Juniper Networks**  
Security Intelligence (SecIntel)

### MODERNIZE

Maximize the scale and performance of your defense systems and deliver automated threat detection and mitigation.

### MITIGATE

Mitigate advanced threats with machine learning algorithms and security intelligence.

### MONETIZE

Monetize-as-a-service, providing security as a value-add to your customers in addition to connectivity.

Get more from what you already have.
